WHY CHOOSE BEAVER BRANDS

Established in 1977. Beaver Brands is a national manufacturer specialising in the manufacture of leading products within:

- Personal Protective Equipment (PPE)
- Lifting and Materials Handling
- Load Restraint and Recovery
- Height Safety
- Safety Footwear
- Workwear

Beaver Brands' success is built on long standing partnerships with resellers, along with its commitment to servicing the specific needs of customers.

Since inception Beaver Brands has been renowned for quality and has invested heavily in maintaining AS/NZS ISO 9001 Quality Assurance accreditation, NATA ISO/ IEC 17025 registration and is soon to have ISO 14001 environmental management accreditation.

PERSONAL AND SITE SAFETY PRODUCT RANGE

With ever present dangers in many workplaces its important to know your employees are supplied with the right personal protective equipment, from a business that only manufactures quality products that meet or exceed Australian Standards.

Beaver Brands not only manufactures its own range of PPE, but offers a number of exclusive leading brands of equipment to cover your personal protection needs.

OUR RANGE INCLUDES

HEAD PROTECTION	TUFFGARD Snap Brim
HEARING PROTECTION	FR NTIER HENOLINIER
EYE & FACE PROTECTION	FR®NTIER MACK.

OUR BRANDS

Frontier brings product design and innovation to our comprehensive range of highly reliable, fit for purpose and cost effective safety products. We take personal protection seriously, consistently working with users of our product to improve product performance and workplace safety culture. Made to the relevant Australian and International standards, our products have been used and relied upon throughout Australia and internationally in a diverse range of applications in a variety of industries.

Australia's top mechanics glove brand provides safe and secure protection from hand injuries in handling applications that can cause impact and vibration injuries. Made from the highest quality materials, Contego gloves are built to protect and last. These tough gloves are certified and tested to rigorous international standards and are designed to assist you do your best work.

One of the world's leading brands of high tech, innovative work safety gloves, Ninja's philosophy is a mix of passion, precision and perseverance. Art and science blend to deliver as much comfort as performance. Unique processes, coatings, finishes, materials and textiles combine to achieve best-in-class benchmark user experience. Made to Australian Standards, Ninja's comprehensive range of application specific gloves have the leading edge in comfort, dexterity, protection and grip. Ninja is exclusively distributed by Beaver Brands in Australia.

Established in 1902, Mack has become a legendary brand as one of the world's leading heavy-duty truck manufacturers. Mack eyewear is designed to endure and worn to perform. Mack eyewear range is bold, stylish, and strong on safety. Beaver Brands is proud to have the exclusive rights to Mack eyewear in the Australian market.

GrippazTM industrial grade disposable gloves have been developed to provide optimal performance in a range of working conditions. Holding patented technologies, Grippaz is strong, safe and versatile, whilst providing tremendous tactility and amazing grip.

Cancer Councils are the leading independent funders of cancer research in Australia. Amongst other products, they market a range of high-quality, affordable sun protection products. Beaver Brands is proud to be the exclusive distributor of Cancer Council Sunscreens to the industrial safety sector in Australia. The product features broad-spectrum sunscreens in a range of innovative formulations and packaging to suit the working environment. Royalties support the activities of the Cancer Councils including vital research, patient support services and community education programs.

HEAD PROTECTION WHEN IT MATTERS MOST

WHATEVER THE INDUSTRY AND **ENVIRONMENT, WE HAVE A** TRUSTED RANGE OF SAFETY HELMETS AND ACCESSORIES THAT KEEP THE HEAD SAFE FROM SIDE IMPACT OR FALLING OBJECTS.

TYPE 1

Hard hats (TG56, 57, 58 and 59 series) are made from ABS plastic.

TYPE 2

Clearview hard hats are made from polycarbonate and meet type 2 Standards. This means they are also suitable for hot work environments.

With vented and non-vented styles, shade attachments and the new generation Clearview series safety helmets, our Frontier range offers supreme protection, durability and comfort. All helmets and accessories are fully certified to meet Australian Standards AS/NZS 1801: 1997.

AUSTRALIAN DESIGNED AND MADE

All of Frontier's latest high performing TG type 1 and 2 safety helmets have been specially designed and made in Australia for our harsh conditions and are not only stylish, but light weight and comfortable enough to wear all day long. They are made to exacting Australian Standards and meet both vertical and lateral impact requirements.

MATERIALS USED

All of our safety helmet shells are primarily made using UV stabilised high density polycarbonate (HDPC) or ABS (Acrylonitrile Butadiene Styrene) which minimises and effectively disperses impact forces.

The polycarbonate versions are ideal for the Clearview hard hat as they allow see-through visibility whilst offering UV400 sun protection. The ABS version meanwhile allows for a better painted surface and print absorption. With a low profile design and a webbed 6 point harness all Frontier hard hats offer supreme comfort for all day wear.

VENTED AND NON-VENTED OPTIONS

VENTED

Because the head holds so much heat, our Frontier vented hard hats encourage air flow to keep the head cooler. Vents have been engineered to provide maximum air flow without compromising the integrity of the helmet.

NON VENTED

Frontier non-vented versions are suitable for most applications and use in areas where dust ingress to the upper head needs to be minimised.

FITTING AND ADJUSTING YOUR HELMENT

RATCHET ADJUSTMENT

All Frontier harnesses have been designed for ease of use and to last the distance.

Adjust the helmet sizing by tightening and loosening the ratchet wheel until it is comfortable.

SLIP ADJUSTMENT

Adjust helmet sizing by slipping the band up and down the notches until it fits comfortably.

CARE AND MAINTENANCE

All Frontier safety helmets can be cleaned with soap and water and then dried off with a soft cloth. A helmet should never be cleaned with abrasive substances or solvents and must not be stored in direct sunlight or in contact with chemicals.

It is important that the wearer inspects their helmet regularly and any helmet showing more than superficial abrasions or scuffing to the shell, should be replaced.

CHECKLIST

REPLACE YOUR SAFETY HELMET IF:

- The shell shows signs of wear or degradation e.g. colour faded or stained
- There are any dents, cracks, nicks or gauges in the inner or outer shell
- The shell feels stiff or brittle, or appears dull or chalky
- The date of manufacture has exceeded 5 years

REPLACE YOUR HARNESS IF:

- One or more of the points is damaged
- Your harness is brittle, worn, or damaged
- The suspension no longer holds the helmet on securely and comfortably.

WHEN SHOULD YOU REPLACE YOUR **SAFETY HELMET OR HARNESS?**

To comply with Australian Standards, all helmets are marked with the month and year of manufacture. If helmets are stored in boxes and do not experience environmental extremes, the shelf life of a helmet is not limited.

However, we do not recommend that a helmet should be in use five years after date of manufacture. After that time, the Australian Standard is no longer valid.

CUSTOM PRINTABLE MODELS

Corporate branding and reflective tape additions are all possible with the Frontier hard hat. Beaver Brands offer a full hard hat printing service using the latest 6 colour, multiple position pad printing machines. So instead of outsourcing this service after the product is received, why not let us print your hard hats at the point of dispatch!

- All hard hats can have logos pad printed in up to 4 positions.
- Up to 6 colour logos
- MOQ Minimum order of 20 for private labelling of caps.

Please contact your Beaver Brands sales representative for a quote and further information

SAFETY WITH ACLEAR VIEW

NEW GENERATION FRONTIER CLEARVIEW SAFETY HELMETS

As their name suggests the new generation Frontier Clearview range offer enhanced peripheral vision for additional awareness of possible hazards. The translucent shell allows wearers to look upwards without tilting the head back, and although see-through, the shell provides UV400 protection.

CLEARVIEW HARD HAT

FRNTIER

FEATURES AND BENEFITS

- . UV400 stabilised and is suitable for indoor or outdoor use
- · Greater all round safety by increasing the wearer's peripheral vision
- Reduced neck strain associated with tilting the head back to constantly look up
- High temperature rated thanks to their polycarbonate composition
- Approved to AS/NZS 1801:1997

HEARING PROTECTION

HEARING DAMAGE IS GRADUAL AND CAN OFTEN OCCUR WITHOUT THE WORKER BEING AWARE OF THE CONSEQUENCES. YET, **ONCE HEARING DETERIORATION** OCCURS, IT IS IRREVERSIBLE.

Contributing factors to workplace noise are often compounded by secondary sources including traffic, machinery, electrical equipment and music. These are just some examples that are very predominant in today's environment.

Awareness and preventative measures are essential to preserve hearing as long-term damage is not usually apparent until 10 to 20 years after **exposure**. With appropriate use of hearing protection products, noise induced hearing loss is largely preventable.

Frontier's range of hearing protection products are designed to protect against noise exposure in the workplace. Our products are certified to Australian and New Zealand Standards (AS/NZS1270) with tightly controlled quality processes.

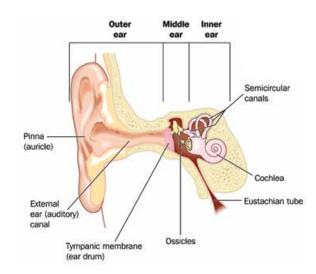

THE CLASS SYSTEM FOR NOISE **LEVEL PRODUCTION**

Under the Australian and New Zealand Standard AS/NZS1270, hearing protectors are tested against a range of noise frequencies and a Sound Level Conversion 80 (SLC80) rating obtained.

SLC 80 is a rating defined as the difference between the sound level of the environment and the level of the sound actually heard when the hearing protection is being used. The resulting dB level is the level of sound getting through when the protector is used.

CLASS	AVERAGE EXPOSURE DB(A) OVER 8 HOURS	SLC80 DB(A) Range
1	Less than 90	10 to 13
2	90 to less than 95	14 to 17
3	95 to less than 100	18 to 21
4	100 to less than 105	22 to 25
5	105 to less than 110	26 or greater

Noise-induced hearing loss is caused by prolonged exposure to loud noise. The noise damages inner ear hair cells, causing hearing loss to deteriorate over time and become permanent. Noise-induced hearing loss is largely preventable.

NOISE LEVEL COMPARISONS

NOISE SOURCE	DECIBEL LEVEL	DECIBEL EFFECT
Jet take-off (at 25 meters)	150	Eardrum rupture
Aircraft carrier deck	140	Eardrum rupture
Military jet aircraft take-off from aircraft carrier with afterburner at 15m (130 dB)	130	Eardrum rupture
Thunderclap, chain saw. Oxygen torch (121 dB)	120	Painful. 32 times as loud as 70 dB
Steel mill, auto horn at 1 meter. Turbo-fan aircraft at takeoff power at 65m (118 dB). Riveting machine (110 dB); live rock music (108 - 114 dB)	110	Average human pain threshold. 16 times as loud as 70 dB
Jet take-off (at 305 meters), use of outboard motor, power lawn mower, motorcycle, farm tractor, jackhammer, garbage truck. Boeing 707 or DC-8 aircraft at one nautical mile (1900m) before landing (106 dB); jet flyover at 300m (103 dB); Bell J-2A helicopter at 30m (100 dB)	100	8 times as loud as 70 dB. Serious damage possible in 8hr exposure
Boeing 737 or DC-9 aircraft at one nautical mile (1900m) before landing (97 dB); power mower (96 dB); motorcycle at 8m (90 dB). Newspaper press (97 dB)	90	4 times as loud as 70 dB. Likely damage in 8 hour exposure
Garbage disposal, dishwasher, average factory, freight train (at 15 meters). Car wash at 6m (89 dB); propeller plane flyover at 300m (88 dB); diesel truck 65km at 15m (84 dB); diesel train at 70km at 30m(83 dB). Food blender (88 dB); milling machine (85 dB)	80	2 times as loud as 70 dB. Possible damage in 8 hour exposure
Passenger car at 105km at 7m (77 dB); freeway at 15m from pavement edge 10 a.m. (76 dB). Living room music (76 dB); radio or TV-audio, vacuum cleaner (70 dB)	70	Arbitrary base of comparison. Upper 70s are annoyingly loud to some people
Conversation in restaurant, office, background music, Air conditioning unit at 30m	60	Half as loud as 70 dB. Fairly quiet
Quiet suburb, conversation at home. Large electrical transformers at 30m	50	One-fourth as loud as 70 dB

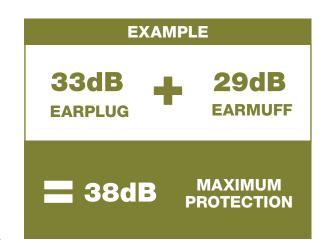

DUAL PROTECTION

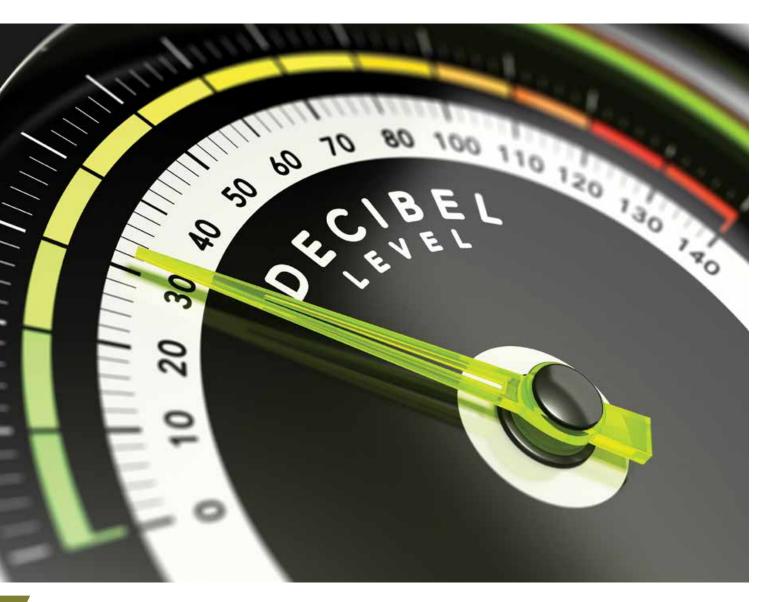

MAXIMUM PROTECTION BUT WITH LIMITATIONS

In some environments, wearing both earplugs and earmuffs is required for maximum protection, however attenuation is limited due to flanking sound transmission paths in the skull. Therefore the attenuation values of each individual hearing protector cannot be simply added.

How to Estimate Protected Noise Level with Dual Protection - Examples

To estimate protected noise level, add 5 dB to the higher NRR (Noise Reduction Rating) protector.

BE SEEN NOT HEARD

FRONTIER CLASS 5 OVERHEAD EARMUFFS

Add that extra level of safety with the Frontier hi-vis Class 5 overhead ear muff - offering both high visual identification and supreme protection for the wearer.

EARPLUG FITTING INSTRUCTIONS

In selecting the best earplug for your situation, consider noise levels and your need to communicate with co-workers or hear warning signals on the job.

Ensure hands and ear plugs are clean prior to fitting.

MAINTENANCE

- Inspect earplugs prior to wear for dirt, damage or hardness -discard immediately if compromised
- For proper hygiene, discard single-use earplugs after use

Roll earplug with tips of fingers to compact foam into a thin crease-free cylinder.

Insert the compressed earplug well into the ear canal. Pulling the ear outwards & upwards will make fitting easier.

4.Ensure earplugs are suitably fitted as per diagram.

IMPORTANT
Fit earplugs before exposing yourself to noise and wear them during the entire noise exposure. These earplugs are intended for single use only and should be disposed of after use.

STORAGE

Earplugs must be stored in a clean, uncontaminated area.
Earplugs should not be used if the individual polybag packaging has been opened.

CLASS 5 PRO MUFF CAP ATTACHABLE

FEATURES AND BENEFITS

EARMUFF FITTING INSTRUCTIONS

1.Hair should be moved away from your ears.

4. Slide earmuff cups up or down, until a comfortable fit is achieved and ears are fully enclosed.

2.Slide earmuff cups to the bottom position on each arm.

Using both hands, press alternately on each earmuff arm, until you achieve a comfortable fit on the head and ears.

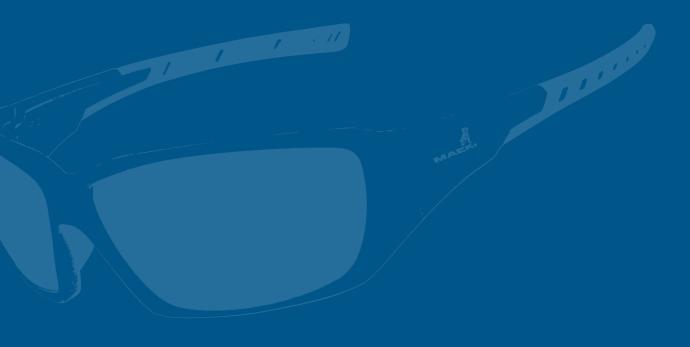

With the earmuff arms still open as wide as possible, place them over your ears.

6. Ear muff arm should be vertical. Ensure equal pressure all round for comfort and maximum protection.

FR NTIER

FRANII

EYE & FACE PROTECTION

EYE INJURY AND DAMAGE IS A REAL AND ALL TOO COMMON WORKPLACE RISK, PARTICULARLY IN INDUSTRIAL ENVIRONMENTS WHERE THE INSTANCE OF CHEMICAL SPLASH, FLYING **DEBRIS, PROTRUDING OBJECTS** OR WORKPLACE MISADVENTURE IS RELATIVELY HIGH.

Eye strain and ocular damage from ultraviolet (UV) radiation is also of significant concern which is why all our eyewear lines have a minimum 99% protection against harmful UV radiation from the sun.

Our safety eyewear range includes a comprehensive array of frame styles, lens shapes and coatings that mitigate risk and increase safety in the vast majority of work application areas.

Our products are manufactured and certified to the most recent Australian Standards AS/NZS 1337 and comply with all identity marking requirements.

WAVELENGTHS AND UV LIGHT

The sun emits three types of light waves and without the correct eye protection, each in its own way can seriously affect the eye.

ULTRAVIOLET LIGHT RAYS

5% of the sun's energy reaches the earth in this form. UV rays (invisible "tanning" rays) can cause serious damage to the unprotected eye including the development of cataracts and corneal blistering.

INFRARED LIGHT RAYS

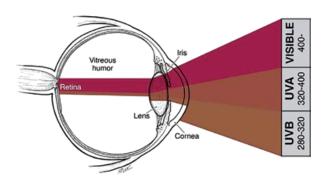

50% of the sun's energy reaches the earth as heat or infrared. Some IR rays will be absorbed by the cornea creating a drying effect – an issue of importance to contact lens wearers.

VISIBLE LIGHT RAYS

45% of the sun's energy reaches the earth in what the eye perceives as colour. Blue Light waves are the most difficult to see. When the unprotected eye strains to focus on it, all other colours can be distorted. After two to three hours in bright sunlight, eyes can have trouble adjusting to night vision.

The human eye is not able to identify the various elements of a ray - it only sees the results, which are a function of the different wavelengths and their respective light intensity. The human eye can only see wavelengths within the "visible spectrum" (between 380 and 780 nanometres).

WHAT EYE PROBLEMS	CAN UV RAYS CAUSE?	
MACULAR DEGENERATION UV rays may lead to macular degeneration, a leading cause of vision loss for older people.	CATARACT UV rays, especially UV-B rays, may also cause some kinds of cataracts. A cataract is a clouding of the eye's natural lens, the part of the eye that focuses the light we see.	PTERYGIUM Another UV-related problem is a growth called pterygium. This growth begins on the white of the eye and may involve the cornea. Eventually, the growth may block vision. It is more common in people who work outside in the sun and wind.
SKIN CANCER Skin cancer around the eyelids is also linked to prolonged UV exposure.	CORNEAL SUNBURN Corneal sunburn, called photokeratitis, is the result of high short-term exposure to UV-B rays. Long hours exposed to UV light without proper eye protection can cause this problem. It can be very painful and may cause temporary vision loss.	

Wear proper eye protection and hats to block the UV rays. To provide adequate protection for your eyes, eyewear should:

- Block out 99 to 100 percent of both UV-A and **UV-B** radiation
- Screen out 75 to 90 percent of visible light
- Be perfectly matched in colour and free of distortion and imperfection.

TYPE OF UV RAYS

There are two types of UV rays: UV-A and UV-B. Over time, the effects of UV rays may cause a number of eye problems.

UV-A

Can hurt your central vision. It can damage the macula, a part of the retina at the back of your eye.

UV-B

The front part of your eye (the cornea and the lens) absorbs most UV-B rays, but these rays may cause even more damage to your eyes than UV-A rays.

EYE PROTECTION STANDARD

The Australian Eye Protection Standard considers the risks of injury and provides guidelines to mitigate against them. Selecting the wrong type of safety glasses or goggles in handling the application hazard can have serious consequences. It is important to consider possible risks including velocity, size and the nature of the hazard when evaluating the right eyewear. The Standards for protective eyewear provides an excellent source of information and assistance.

AS/NZS 1336:1997 RECOMMENDED PRACTICES FOR **OCCUPATIONAL EYE PROTECTION**

This Standard sets out recommended practices for the protection of the eyes of persons at work, against hazards such as flying particles, dust, splashing materials and molten metals, harmful gases, vapours and aerosols, high-intensity radiation generated during welding operations and furnace work. Guidance is given on the selection of eye protectors appropriate to the use of particular lasers. Additional guidance is provided for manufacturers and dispensers of prescription lenses on the requirements for production of prescription personal eye protectors.

AS/NZS 1337.1:2010 PERSONAL EYE PROTECTION

- Eye and face protectors for occupational applications

*PLEASE NOTE: This new Standard supersedes the previous Standard AS/NZS 1337:1992

This Standard specifies minimum requirements for non-prescription eye and face protectors and associated oculars. They are designed to provide protection for the eyes and faces of persons against common occupational hazards such as flying particles and fragments, dusts, splashing materials and molten metals, harmful gases, vapours and aerosols. Requirements for optical qualities and low, medium, high and very high impact resistance are given and appendices describing appropriate test methods are included in this Standard. Requirements for prescription-eye protectors against low and medium impact are given in AS/NZS 1337.6. Requirements for eye protectors against laser radiation are given in AS/NZS 1337, Parts 4 and 5.

The aim of this Standard is to assist in the provision of safe, efficient and comfortable vision in the occupational situation, including consideration of the need for protection against sun glare and optical radiation in the natural environment. The Standard does not apply to filter oculars for protection against optical radiations generated by industrial processes, which are dealt with in AS/NZS 1338.

AS/NZS 1338.1:1992 FILTERS FOR EYE PROTECTORS

- Filters for protection against radiation generated in welding and allied operations

AS/NZS 1338.2:1992 FILTERS FOR EYE PROTECTORS

- Filters for protection against ultraviolet radiation

AS/NZS 1338.3:1992 FILTERS FOR EYE PROTECTORS

- Filters for protection against infra-red radiation

IMPACT PROTECTION RATING

IMPACT PROTECTION IS THE IMPACT SPEED AT WHICH A PARTICLE HITS EYEWEAR. IT IS DESCRIBED IN METRES PER SECOND. REFER TO STANDARD AS/NZS 1337.1:2010

- Low Impact tested full-face-on at 12m/sec
- Medium Impact tested front on, as well as side-on at 45m/sec
- High Impact tested front on, as well as side-on at 120m/sec
- Very High Impact tested front on, as well as side-on at 190m/sec

LENS TYPES AND POLARISATION

POLARISED	
GREEN	An injection moulded lens, grey/green in colour, providing the ultimate in 'comfort' vision, soothing the eyes against harsh glare and bright sun. It also provides excellent depth and colour perception.
GREY	An injection moulded lens, grey in colour, providing the ultimate in 'comfort' vision, soothing the eyes against harsh glare and bright sun. It also provides excellent depth and colour perception.

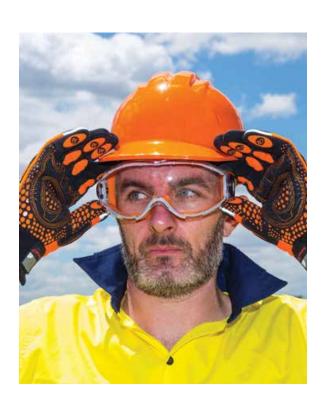

LENS SHADES	
CLEAR	Approved for use indoors.
AMBER	A high definition lens designed for use in low light situations. Approved for use indoors.
SMOKE	Excellent protection against damaging UV rays and glare.
BROWN	A neutral density brown lens that provides true colour definition by fighting glare and enhancing colour contrast.

MIRROR (FLASH) SHADES		
SMOKE/ SILVER MIRROR 14%	Ideal for everyday, all purpose outdoor wear. Neutral density grey lens with metallic silver mirror finish designed to reflect harmful solar rays before they enter the lens. Provides true colour definition.	
LIGHT SMOKE /SILVER MIRROR 29%	For everyday, all purpose outdoor wear. Medium tint clear lens. Silver metallic finish.	
BLUE MIRROR 15%	Ideal for everyday, all purpose outdoor wear. Neutral density blue lens with metallic silver mirror finish designed to reflect harmful solar rays before they enter the lens. Provides true colour definition.	

EYEWEAR MARKINGS

AS/NZS MARKING	DEFINITION
I	MEDIUM IMPACT
C	SPLASHPROOF
D	DUSTPR00F
G	GASTIGHT
Н	HIGH TEMPERATURE
0	OUTDOOR USE, UNTINTED

Any certified safety eyewear product sold in Australia must carry markings either etched or impressed into the frame and lenses indicating the relevant approval. For a single lens product (like a goggle or eye shield) the markings need only appear once. On a dual lens spectacle, the markings must be on each lens.

COMFORT COMES IN WAVES

MACK WAVE SAFETY GLASSES

Classic wrap-around styling in a one piece half frame. Ideal for indoor use or sun wear.

WAVE

FEATURES AND BENEFITS

- Soft TPR super flexible padded side arms for a superior comfort grip
- Adjustable temple side arms alter the angle of view optimally for each application
- 99% UV protection
- Anti-fog coating for use in humid environments (except lite mirror)

RESPIRATORS

THE FRONTIER RANGE OF **DISPOSABLE RESPIRATORY MASKS INCLUDES BOTH CUP SHAPED AND** FOLD FLAT MODELS, DEPENDING ON USER PREFERENCE.

All P1/P2 Frontier masks are certified to Australian Standards AS/NZS1716:2012 and suitable for filtering out most airborne hazards found in the workplace to provide a safe, comfortable and convenient solution.

Frontier masks are maintenance free and designed for single use. This means they are fitted to start a work shift and discarded once the mask is removed on taking a break. A mask should be used for no more than 8 continuous hours. At any time, if breathing starts to become laboured, it is likely the mask is nearing particulate saturation and a new one should be fitted.

CHOOSING THE RIGHT RESPIRATOR MEANS DETERMINING THE HAZARD IN THE APPLICATION.

The following information offers a guide.

PARTICULATE RATING P1

- Protects against low levels of dust. This includes calcium carbonate, natural and synthetic graphite, gypsum, chalk, cement, plaster, marble, zinc oxide, plant pollens, cellulose, sulphur, cotton, ferrous metal filings, coal dust containing less than 10% of free silica
- Protects against solid and liquid aerosols
- Retains about 80% of particles smaller than 2 micrometers
- Can be used for hand sanding, drilling, and cutting
- Occupational Exposure Limit (OEL): Protects against materials in concentrations 4 x limit
- Protection Factor: Protects against materials in concentrations 4 x limit.

PARTICULATE RATING P2

- Protects against moderate levels of dust. In addition to P1 (above), this includes asbestos, copper, barium, titanium, vanadium, chromium, manganese, hardwood, coal dust with free silica content exceeding 10%, mining industry, chemical industry, metallurgic industry (version with exhalation valve), hard woodworking
- Protects against solid and liquid aerosols
- Higher protection than P1
- Retains about 94% of particles smaller than 0,5 micrometer
- Can be used for plastering and sanding
- Occupational Exposure Limit (OEL): Protects against materials in concentrations 12 x limit
- Protection Factor: Protects against materials in concentrations 10 x limit.

Note: These masks are not suitable for toxic atmospheres or those which are deficient in oxygen. In such cases you may need a half mask with separate and appropriate filters or a supplied air respirator.

ADDITIONAL FEATURES GUIDE

FRONTIER MODELS WITH VALVE:

The 360° exhalation valve considerably reduces breathing resistance and build-up of heat and moisture in the mask.

COMFORT SEALING LIP

The soft sealing lip guarantees a secure, comfortable sealed positioning of the mask.

COMFORT NOSE CLIP

The mask is fitted with a high-quality nose clip making it individually adjustable.

CARBON INSIDE OUR FRONTIER CARBON ACTIVATED MASK

The additional activated carbon layer incorporated in the filter material reduces unpleasant odours.

DOUBLE NON-LATEX HEADBAND

for a secure, allergy free fit on all models except the nuisance mask.

FITTING INSTRUCTIONS

1. Hold the respirator in one hand with nose-piece at your fingertips, allowing the head straps to hang freely below your hands.

2. Place the respirator against your face with the nose-piece on the bridge of your nose.

3. Place the top strap high on the back of your head. Move the bottom strap over your head and position it below your ears.

4. Use both hands to mould the nose-piece to the shape of your nose for a secure, comfortable fit.

5. Test to fit. Cup your hands over the respirator and exhale strongly. If air flows around your nose, tighten the nosepiece. If air escapes around the edges, reposition the straps for a better fit.

RESPIRATOR DISPOSABLE CUP DUST MASK P2

FEATURES AND BENEFITS

- Industrial quality grade materials
- · P2 filters around 94% of airborne particles including common microbes and viruses
- · Cup structure provides strength and resistance to flattening

HI VIS VESTS

INJURY OR NEAR-MISS BECAUSE SOMEONE DIDN'T SEE YOU?

Accidents happen commonly during the day and especially in low light. Whether you're exactly where you're supposed to be, or in the wrong place at the wrong time, wearing a hi vis vest increases your chances of being seen, therefore avoiding accidents.

Frontier high-visibility garments issued for safety on site or on-road, meet the following performance standards;

- AS/NZS 1906.4:2010
- AUSTRALIAN STANDARD FOR HIGH-VISIBILITY CLOTHING 4602:1:2011.

NOTE:- All garments should be worn and maintained correctly to ensure maximum protection.

FR®NTIER

FRONTIER Contego & Grippaz MARTHERINOLOGI

VINJA FRENTIER Contego Scrippaz

HEALTH AND SAFETY FOR YOUR HANDS

HANDS AT WORK ARE EXTREMELY **VULNERABLE TO A WIDE RANGE** OF HAZARDS WHICH INCLUDE **CUTS, BLOWS, CHEMICAL ATTACK** AND TEMPERATURE EXTREMES. YOUR HANDS ARE YOUR MOST IMPORTANT TOOLS, SO WE WANT TO PROTECT THEM WITH THE BEST.

WHAT GOES INTO GREAT GLOVES?

With our wide range of work gloves you can count on the ultimate combination of functionality, durability, economy and protection to match your specific job requirements. Today, industry has increasingly complex, sensitive and often hazardous manufacturing and handling processes. Hence our offering helps identify your safest "fit for purpose" options.

THE IMPORTANCE OF **GLOVE MAINTENANCE**

Wearers must take careful note of the condition of their gloves and replace them as soon as any degradation, contamination or damage has taken place that renders the gloves ineffective for their intended function. This is especially important for chemical-resistant gloves that offer the wearer protection from serious hazards.

Check for gloves that have become brittle or cracked, softened excessively, or show signs of becoming abnormally porous. Effective protection is maintained by regular replacement of the gloves.

Protective gloves must be worn

CARE BEFORE USING GLOVES IN CHEMICAL ENVIRONMENTS

BEFORE USE

- Make sure gloves are dry both inside and out before reusing
- Thoroughly wash and dry your hands before donning the gloves.

DURING USE

- Slightly folding the sleeve of the glove over itself will help prevent unwanted substances from coming into contact with the arms
- Frequently check that the gloves are not displaying any signs of degradation or becoming porous
- DO NOT use gloves beyond the recommended exposure time, as highlighted within a COSHH (Control of Substances Hazardous to Health) assessment.

REMOVAL

- Always follow user instructions when removing
- Heavily contaminated gloves should be disposed of safely and should be removed from the hand by easing each glove off with the other until they can be safely dropped into a suitable container.

CLEANING

Remove excess contaminant. If safe to do so, gloves may then be washed with mild detergent in warm water (provided that the contaminant does not have an adverse reaction to water) and left to dry.

COMPLIANCE AND TEST STANDARDS

WHAT THE SYMBOLS REPRESENT

EN 388 4

EN 388

This Standard applies to all kinds of protective gloves giving protection from mechanical risks, in respect of physical problems caused by abrasion, blade cut, tearing or puncture. This Standard also covers risk of electrostatic discharge.

EN 374

This Standard specifies the capability of gloves to protect the user against chemicals and/or micro-organisms.

CHEMICAL RESISTANT

The 3 letter code applies to the chemicals it is resistant to.

Low chemical resistance to unspecified chemicals.

EN 511

This Standard applies to gloves which protect the hands against convective and contact cold.

EN 407

This Standard specifies thermal performance for protective gloves against heat and/or fire.

EN 659

This Standard defines performance requirements for gloves designed to protect fire fighters against heat and flames.

EN 421

This Standard lays down test methods and performance criteria for gloves offering protection against ionising radiation and radioactive contamination.

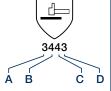

EN 455

Medical gloves for single use. If a glove is to be used for food handling, it is required to carry either the words 'for food use' or this symbol.

WHAT THE NUMBERS REPRESENT

MECHANICAL HAZARDS: EN 388

PERFORMANCE LEVEL

(a) Abrasion resistance (b) Blade-cut resistance 0-5 (c) Tear resistance 0-4(d) Puncture resistance 0-4

The same method applies to these two standards below also.

EN 511: COLD

PERFORMANCE LEVEL

(a) Resistance to convection cold 0-4(b) Resistance to contact cold 0-4 (c) Permeability to water

0-12 250 >15 350 >15 3 4 500 >15

THERMAL HAZARDS: EN 407

(a) Burning behaviour

(b) Contact heat (c) Convective heat

(d) Radiant heat

(e) Small splashes of molten metal 0-4

PERFORMANCE LEVEL 0-4

0-4

0-4

(f) Large splashes of molten metal 0-4

CONTACT HEAT

A sample is taken from the palm area of a glove. The outside of the glove is put on a hot surface and the temperature of the inside of the glove is then monitored. The temperature on the inside of the glove must take 15 seconds or more to rise by 10°C from room temperature.

EN 407	CONTACT	THRESHOLD TIME
PERFORMANCE LEVEL	TEMP. °C	SECONDS
1	100	>15
2	250	>15
3	350	>15
4	500	>15

MECHANICAL HAZARDS TEST: EN388 IMPORTANT CHANGES EXPLAINED ON THE NEXT PAGE >>

CHANGES TO THE EUROPEAN STANDARDS

CHANGES TO CE GLOVES STANDARD EN 388

During 2016 a new version of EN 388, Protection against Mechanical Hazards, was published. It allows products offering higher classifications of cut levels to be identified.

WHAT CHANGED

Any sample tested for cut resistance using the existing coup method, which can blunt the blade used in the test, will have to be additionally tested using the new ISO cut method.

There will be 6 cut levels defined on the ISO cut method. Levels A, B and C are new. Level D is of a different value to the level previously quoted as 4. Level E is the same value previously quoted as level 5. Level F is also new and is the highest cut resistance value

LEVEL A NEW

LEVEL B NEW

LEVEL C NEW

LEVEL D

LEVEL E

LEVEL F NEW

2 5 10 15 22 30

BACK OF HAND PROTECTION

(impact protection testing) is now included

- **3** means the sample achieved level 3 for abrasion
- 4 means the sample achieved level 4 for coup cut
- 4 means the sample achieved level 4 for tear
- **3** means the sample achieved level 3 puncture
- **E** means the sample achieved level E for ISO cut which was tested due to blade blunting during the coup test
- P means the sample passes requirements for impact protection.

FURTHER CHANGES TO THE EN TEST STANDARDS

WHAT THE CHANGES IN STANDARD MEANS TO YOU?

- This change only affects new products being certified once the Standard has been published.
- As with any new PPE standard, it does not apply retrospectively.
- Over the next few years, you will see more and more products carrying this Standard.
- **EN420:** General requirements for Protective Gloves - New Test Method being added (prEN 16778) for the determination of the presence of Dimethylformamide (DMF), a toxic ingredient of insecticide sometimes used in the leather tanning process.
- **EN374-1:** Mandatory Challenge Chemicals increased to 18 from 12 and Creation of 3 levels of Permeation Testing, i.e. Type A gloves (Must pass on 6 Challenge chemicals), Type B Gloves (3 Challenge Chemicals) and Type C Gloves (1 Challenge chemical).
- EN374-2: Claims for micro-organism resistance must now satisfy EN374-5. If virus protection is claimed, it must pass ISO 16604 (EN374-2 for bacteria and fungi).
- **EN374-3:** Permeation of pesticides now included and the Standard for this hazard will now fall under FN16523-1.
- **EN374-4:** Determination of Resistance to Degradation determined by measuring the permeation resistance before and after 60 mins. exposure to a chemical. Degradation results must be included in the User Information for those chemicals which correspond to the letters under the pictogram.

NINJA GLOVES - MADE TO AUSTRALIAN STANDARDS

EN TO AUSTRALIAN AND NEW ZEALAND STANDARDS COMPARISON

Ninja® gloves are made, tested and certified to Australian Standards. This means our manufacturing processes are audited to guarantee Ninja's® cutting edge, high quality production.

The Australian Standard AS/NZS 2161.3 refers to the existing mechanical hazards test EN388:2003. Recently, a new test, EN388:2016, that has started to be used internationally, better defines glove Cut and Puncture resistance features and aims to provide the user with more information for a safer choice. To help make that best choice, Ninja® will progressively test to both methodologies, thus providing an Australian Standard certified product, as well as informing the new test ratings as they become available.

This standard applies to ALL safety gloves and requires, amongst other things, the packaging to include information about glove size, dexterity and design category.

MECHANICAL EN388: 2003 AS/NZS 2161.3: 2005

There are four digits displayed alongside this pictogram. Each number gives the performance level on a scale of 0 to 5 against four hazards in this order: abrasion, blade cut, tear resistance and puncture resistance.

CHEMICAL AND MICRO-ORGANISM EN374: 2003 AS/NZS 2161.10: 2005

The pictogram (on page 73) is accompanied by at least three digits each of which corresponds to a certain classified chemical. For example, 'A' is for methanol and 'B' is for acetone. For chemical risk gloves, performance levels are measured on a scale of 1 to 6 to indicate how quickly the hazardous chemical may come into contact with the skin through the glove, known as breakthrough time. Performance level 1, for example, means the liquid can permeate the glove in 10 minutes, and level 6, means the chemical will not come into contact with the skin for at least 480 minutes.

YOUR GUIDE TO GLOVE TYPES

Frontier has a comprehensive range of extremely reliable, fit for purpose, and cost effective hand protection lines. From traditional make leather and cotton models, to the latest application-specific synthetics; including general purpose, chemical and cut resistant styles. Made to the relevant International Standards, our products have been used and relied upon throughout Australia by a diverse number of industries, in various applications from sensitive to dangerous.

Australia's top mechanics glove brand provides safe and secure protection from hand injuries in handling applications that can cause impact and vibration injuries. Made from the highest quality materials, Contego gloves are built to protect and last. These tough gloves are certified and tested to rigorous international standards and are designed to assist you do your best work.

Grippaz™ industrial grade disposable gloves have been developed to provide optimal performance in a range of working conditions. Holding patented technologies, Grippaz is strong, safe and versatile, whilst providing tremendous tactility and amazing grip.

One of the world's leading brands of high tech, innovative work safety gloves, Ninja's philosophy is a mix of passion, precision and perseverance. Art and science blend to deliver as much comfort as performance. Unique processes, coatings, finishes, materials and textiles combine to achieve best-in-class benchmark user experience. Made to Australian Standards, Ninja's comprehensive range of application specific gloves have the leading edge in comfort, dexterity, protection and grip. Ninja is exclusively distributed by Beaver Brands in Australia.

❖ The symbols appearing next to Ninja gloves indicate the coating technologies used unless otherwise stated

NFT™ - UNMATCHED COMFORT AND DURABILITY

The New Foam Nitrile Technology is a unique proprietary technology offering the most technologically advanced, light weight, breathable, comfortable and durable gloves that feel like a second skin. Rigorously engineered to give outstanding grip, abrasion resistance and dexterity for precision handling in oily, greasy and dry environments. It is one of Ninja®'s next-generation technologies.

HPT™ - SUPERIOR GRIP AND DEXTERITY

The Hydropellent Technology is a unique proprietary coating that repels liquid and provides excellent grip in wet, dry and oily conditions. The HPT™ offers secure handling gloves that are extremely light weight and dexterous with superior grip features for maximum control in wet environments.

Furthermore, this unique coating has "encapsulated air pockets" which absorb and mitigate the effects of light vibrations enhancing its grip performance.

RFT™ - EXTREME ENDURANCE AND GRIT

Rufftec™ is a unique proprietary technology that offers excellent abrasion resistant characteristics that make these gloves outlast all other. Excellent grip in dry, oily and wet conditions.

GLOVE SIZES

Poorly fitting gloves can cause injury due to the glove slipping and the user lacking dexterity if the glove are too loose. Use the guide below to assist with choosing the right sized glove.

WHAT'S MY GLOVE SIZE?

Measure the circumference of your hand in inches or centimetres between thumb and knuckle, then locate your size in the chart.

SIZE ALPHA	SIZE NUMERIC	HAND IN CENTIMETERS	HAND IN INCHES
XXS	5	12.7 - 15.2	5" - 6"
XS	6	15.2 - 17.7	6" - 7"
S	7	17.7 - 20.3	7" - 8"
М	8	20.3 - 22.8	8" - 9"
L	9	22.8 - 25.4	9" - 10"
XL	10	25.4 - 27.9	10" - 11"
2XL	11	27.9 - 30.4	11" - 12"

CUT RESISTANT DRY ENVIRONMENT

MAXIM C5 GLOVE

FEATURES AND BENEFITS

- 15 gauge HPPE, glass, nylon/spandex plaited composite knitted liner
- High performance engineered liners made from high tensile yarns made in Ninja®'s own manufacturing facilities for outstanding cut resistant quality
- The most light weight liner and coating for maximum comfort and cut resistance
- · Re-enforcement between thumb and forefinger greatly extends the life of the glove
- Approved to AS/NZS 2161.3:2005

APPLICATIONS

Automotive industry, goods handling, light fabrication, quality inspection, assembly and maintenance, mild abrasive surface handling, mining and construction.

RAZR DIAMOND C3 GLOVE

FEATURES AND BENEFITS

- 18 gauge Dyneema® Diamond, nylon/spandex knitted liner
- Soft PU coating offering suberb flexibility and comfort
- High cut performance 200% improvement in cut resistance performance when compared to gloves made with standard Dyneema® fibre
- The dramatically thin fibre of Dyneema® Diamond technology allows for increased cut resistance without the fibreglass discomfort. It allows for better feel and control and radiates heat away from hands for all-day comfort
- Approved to AS/NZS 2161.3:2005

APPLICATIONS

Steel industry, sheet metal fabrication, automotive industry, glass and paper handling, heavy metals handling, plastic, carpet and cardboard trimming and cutting.

CUT RESISTANT WET AND OILY ENVIRONMENT

MAXIM C3 OIL GLOVE

FEATURES AND BENEFITS

- Excellent breathability and grip, soft textured NFT™ coating with the 'micro-capillaries' finish channels away excessive fluid from the surface keeping hands dry and cool from inside out, providing excellent grip in oily environments
- 18 gauge HPPE, glass, nylon/spandex plaited composite knitted liner
- The most light weight liner and coating for maximum comfort and cut resistance
- Re-enforcement between thumb and forefinger greatly extends the life of the glove
- Approved to AS/NZS 2161.3:2005

APPLICATIONS

Automotive - engine and transmission, handling and assembly of oily/greasy sharp objects, light metal processes, metalworking, mining and construction.

CARTON QTY

60 pairs

FEATURES AND BENEFITS

- 40cm blue cowsplit
- Gold half welts
- · Self hemmed
- Full jersey sock lining
- Reinforced palm, fingers and thumb for high wear areas
- Kevlar® stitched

APPLICATIONS

Welding, foundries, smelters, mining, construction.

LEFTIE WELDER GAUNTLET GLOVE

SIZE

One size fits all

FEATURES AND BENEFITS

· 40cm green cowsplit

FRWELDGRPBL0000

· Red half welts

CODE

- · Self hemmed
- · Full jersey sock lining
- Left hand only x 2
- Resistance to burning rated to level 4
- Resistance to contact heat rated to level 1
- · Resistance to convective heat rated to level 4
- Resistance to small drips of molten metal rated to level 4
- Kevlar® stitched

APPLICATIONS

Welding, foundries, smelters, mining, construction.

ULTIMATE WELDER GAUNTLET GLOVE

FEATURES AND BENEFITS

- · 36cm cowsplit leather
- Kevlar® thread to resist burning
- Tilted wing thumb allows better open hand pulling and grabbing
- · No-gap full welts
- · Double in-sewn elastic
- Yellow flame resistant jersey lining
- 4mm foam socked lining
- Black flame resistant drill cuff lining
- · Double in-sewn elastic

APPLICATIONS

Welding, foundries, smelters, mining, construction.

POWER TOUCH TIG GAUNTLET GLOVE

FRNTIER

FEATURES AND BENEFITS

- Super fine goat's skin
- Inseam clute back
- Natural split leather cuff

APPLICATIONS

Welding, foundries, smelters, mining, construction.

LEATHER GAUNTLET FOUNDRY CHIEF EXT CUFF GLOVE

FR®NTIER

FEATURES AND BENEFITS

- . 1.4mm select shoulder split
- Finger tip and palm patch in high wear high heat area
- Full jersey sock lining for comfort and protection
- 45mm extended cuff for forearm protection
- Resistance to burning rated to level 4
- · Kevlar® stitched

APPLICATIONS

Welding, foundries, smelters, mining, construction.

SMELTER KING GAUNTLET GLOVE

FEATURES AND BENEFITS

- Cut level 3 protection
- Contact heat rated to level 3
- · Convective heat rated to level 4 · Spark resistant terry cord material
- Gauntlet design for forearm protection

APPLICATIONS

Pot rooms (aluminium), foundries, molten splash metal, high heat areas, Oven work.

GLOSSARY

PENETRATION

Penetration is the movement of a chemical, hazardous substance or micro-organism through porous materials, seams, pinholes or other imperfections in a protective glove material at a non-molecular level.

CHEMICAL DEGRADATION

Chemical degradation of a glove occurs where exposure of the material to a chemical agent causes the loss of one or more of its original physical qualities. Signs of chemical degradation may include softening, swelling, brittleness, loss of flexibility, weakness, tackiness, disintegration etc. Resistance to degradation is measured as a loss of tensile strength. The loss of 30% tensile strength upon exposure to a chemical defines the maximum useful life of the glove. Resistance to degradation is usually rated on a five point scale from Excellent to Not Recommended.

PERMEATION OF CHEMICALS

Permeation occurs where a chemical or hazardous substance passes through an intact glove by diffusion, this can occur even if the glove is undamaged. Permeation is inversely proportional to thickness and is often expressed as a qualitative rate ie: fast, medium, slow and zero in addition to the breakthrough time.

BREAKTHROUGH TIME

Breakthrough time is the time it takes for a chemical or hazardous substance to pass through a glove and be detected on the inside surface of the material. It is measured in minutes and is derived from static tests carried out on a specimen cut from a glove. The test is carried out according to a standard method in EN 374-3. Thicker gloves made from the same material will have a longer break-through time since breakthrough time is directly proportional to the square of the thickness. Breakthrough times are specific to the glove tested and gloves of the same material and thickness from different manufacturers can have different breakthrough times. This can be as a result of numerous factors including, differences in raw materials and their content in the finished product, as well as the degree of crossbonding.

Breakthrough times are therefore effectively only 'guides', not hard and fast exposure times. Contaminated reusable gloves should always be washed and contaminated disposable gloves changed as soon as reasonably practicable. It is particularly important that re-usable gloves are thoroughly washed after use since residual chemicals may continue to permeate through the material in storage between 'uses'. Where contact with chemicals has occurred gloves of any description should always be disposed off before the breakthrough time has been reached or if there is any reason to suspect the gloves integrity. In some cases gloves may even need to be discarded before the total in-use-time exceeds the breakthrough time, if permeation through to the inner surface can continue after the glove is washed.

MAKING SENSE OF THE DATA

1 BREAKTHROUGH TIME (BTT)

Measured in minutes

LEVEL

0	1 -	10	minutes

1	11 - 30	minutes

61 - 120 minutes

121 - 240 minutes

241 - 480 minutes

greater than 480 minutes

2 PERMEATION RATE

Milligrams per sq. metre per minute

3 DEGRADATION

Physical effects on a glove; Change in a glove material's physical properties (eg. thickness, weight, strength) as the result of chemical exposure.

Testing is based on the finger portion of the glove, in which, the middle finger of the glove is cut up to 50mm, weighed accurately and then placed on a test tube with exposed coating area. Immerse this tube into the test chemical for 30 minutes. After this time, take out the samples from the test tube and re-weigh after complete drying in oven. Result is recorded as a percent change in weight, coating condition before amd after drying and usability.

4 DEGRADATION RATING

	WEIGHT CHANGE	PUNCTURE RESISTANCE	CONDITION AFTER DRYING	
E (EXCELLENT)	0 to 10%	> 3.4 lbf	Soft	
G (GOOD)	11 to 20%	2.2 - 3.4 lbf	Soft	
F (FAIR)	21 to 30%	1.1 - 2.2 lbf	Slightly Hard	
P (POOR)	Over 30%	< 1.1 lbf	Hard	
NR (NOT RECOMMENDED)	-	-	Break	
NT (NOT TESTED)	-	-	-	
G/E	A degradation test with this chemical was not run. However, since its breakthrough time is greater than 480 minutes, the Degradation Rating is expected to be GOOD to EXCELLENT.			

CHEMICAL RESISTANCE CHART

The chart on the following pages is designed to identify our best fit for purpose glove(s) according to the chemical used. Additionally, some chemical manufacturers' Material Safety Data Sheets (MSDS) may contain recommendations on the most suitable gloves for specific chemicals.

Thou daltable gloves le	r opocine chomicale.

COMPARISON OF COATINGS - NINJA GLOVES

		Nitrile					
	Coating Types	Nitrile Flat (added Crumbs for Nitrachem)	Sponge/Flex	Micro Foam (DS)	2NFT	12NFT	Nitrile Latex Waves Pattern
Coati	ng Description/Features	High resistance to abrasion (similar to PU), tacky finish, excellent dry grip. FDA approved.	Sponge coating (chemically foamed) offers slightly better wet and oil grip than flat Nitrile. It is softer and more flexible, however less soft and breathable than Air Foam Nitrile.	Can be formulated thinner than Nitrile foam coating. Microfoam coatings have a slightly tacky finish.	Unique porous structure with suede finish on Nitrile coating. Offers good wet and oil grip. More elastic and form fitting compared to other Nitrile coatings.	Unique porous structure with suede finish over smooth finish (double layered) Nitrile coating. Oil/ glue does not permeate.	Solvent free, "Waves" pattern structure. Nitrile Latex coating provides flexibility, and highest resistance to abrasion. Excellent dry and wet grip with good oil grip.

	Wet	Poor	Fair	Fair	Very good	Good	Good
	Limitations	Poor breathability, less soft so faster hand fatigue, inherently soapy in wet environment.	Inherently soapy in wet environment and permeable.	Inherently soapy in wet environment and less permeable than Sponge Nitrile.	Due to porous structure, moisture penetration is high. Lower abrasion resistance and durability compared to flat.	Less flexible compared to 2NFT due to double coating.	Less flexible. Reduced tactility.

SUN PROTECTION & HYDRATION

STAYING UNDER SHADE OR INDOORS IS THE BODY'S BEST **DEFENCE AGAINST THE EFFECTS** OF THE SUN, HOWEVER WHEN YOUR WORK REQUIRES YOU TO BE OUTDOORS IN THE SUN, THERE IS NOTHING BETTER TO PROTECT YOU THAN OUR RANGE OF CANCER COUNCIL SUNSCREENS.

SKIN CANCER - THE STATISTICS

Skin cancer occurs when skin cells are damaged, for example, by overexposure to ultraviolet (UV) radiation from the sun.

THERE ARE THREE MAIN TYPES OF SKIN CANCER:

- 1 BASAL CELL CARCINOMA
- 2 SQUAMOUS CELL CARCINOMA
- 3 MELANOMA THE MOST DANGEROUS FORM OF SKIN CANCER

Both basal cell carcinoma and squamous cell carcinoma are known as non-melanoma skin cancer. Approximately, two in three Australians will be diagnosed with skin cancer by the time they are 70, with more than 750,000 people treated for one or more non-melanoma skin cancers in Australia each year. Non-melanoma skin cancer is more common in men, with almost double the incidence compared to women. Excluding non-melanoma skin cancer, melanoma is the third most common cancer in Australians. (Cancer Council, 2017)

THE IMPORTANCE OF SUNSCREEN

Sunscreen protects your skin from the sun's ultraviolet or UV rays. The predominant reason for its' use is the reduction of skin cancer risk which, as stated above, has a high incidence in Australia.

Two types of UV rays, known as UVA and UVB, trigger harmful changes in your skin. According to the most credible scientific sources, UVA rays account for up to 95 percent of the ultraviolet radiation that reaches the earth's surface.

SOME OTHER BENEFITS OF SUNSCREEN ARE:

- Prevents Premature Aging
- Prevents Tanning
- Lowers Blotchiness on Face
- Enhances Health of the Skin
- Prevents Sunburns
- A Good Cosmetic Option.

The Cancer Council is the leading independent funding body for cancer research in Australia. The Cancer Council sunscreen offer includes broad-spectrum sunscreens in a range of innovative formulations and packaging to suit the working environment.

BENEFITS OF BUYING THE TRUSTED CANCER COUNCIL PRODUCT RANGE

MARKET LEADING PRODUCT	Very high protection SPF50+ UVA/UVB Broad Spectrum 4 hours water and sweat resistant 3 year shelf life NO nano particles
SOCIAL RESPONSIBILITY	Proceeds help fund cancer research, patient support and education. "Every tube helps"
ENVIRONMENTALLY SENSITIVE	Recyclable packaging • Low impact formulation
OHS COMPLIANT	Approved by the Safety Institute of Australia • Easy to use and dispense Rapid touch dry formulation • Dust and dirt won't stick • Non-slip grip
PRICE COMPETITIVE AND AFFORDABLE	Corporate and Non Retail rates available
MULTITASK AND SURFACE COMPATIBILITY	No impact on industrial coated surfaces
LOCAL SOURCING	Australian Made and Owned

EXTRA PROTECTION FOR THE HEAD AND NECK

The Snap Brim is an easy attached rigid sunshade for hard hats. It provides superior sun protection with a minimum of effort for anyone working outdoors. The Snap Brim's sturdy construction shelters the wearer from the elements and shields from harmful UV rays, helping to minimise the risk of skin cancer and its effects.

For more information on our Snap Brims >>> see page 15

MORE ABOUT SUNSCREEN -HOW DO SUNSCREENS WORK?

THERE ARE TWO TYPES OF SUNSCREEN **INGREDIENTS:**

- 1 Absorbers which absorb most of the UV, and
- 2 Reflectors that scatter most of the UV away from your skin.

Some sunscreens utilise both absorbing and reflecting ingredients. Examples of reflecting ingredients include Zinc Oxide and Titanium Oxide. UV absorbers use ingredients such as Oxybenzone, Octocrylene, 4-Methylbenzylidene camphor and Butyl methoxy dibenzovlmethane.

WHAT DOES SPF MEAN?

SPF stands for Sun Protection Factor. SPF relates to the amount of time it takes for redness to appear on the skin compared to when no product is used at all. The test is done in a laboratory.

For example, if it takes 10 minutes for unprotected skin to show redness, then an SPF30 sunscreen correctly applied, in theory, will take 30 times longer or 300 minutes to burn. However, it is hard to achieve this level of protection in real life - factors such as skin type, ultraviolet (UV) levels, swimming/drying and how much sunscreen you apply can affect the level of protection. That's why we always recommend applying liberally every two hours or after swimming, sweating or towel drying. It is also important to apply 20 minutes beforehand before being exposed to UV.

To maximise the protective benefit of sunscreen, apply as directed (see below) and whenever possible in conjunction with other sun protection measures such as protective clothing, hats, and sunglasses. When UV levels are at their highest, the most effective protection is to seek shade.

WHAT DOES BROAD SPECTRUM MEAN?

Broad spectrum sunscreens offer protection from both UVA and UVB rays, the two types of harmful ultraviolet radiation emitted by the sun. UVB is the principal cause of sunburn, but both UVA and UVB contribute to increased skin cancer risk.

HOW SHOULD I APPLY SUNSCREEN?

Sunscreen should be applied 20 minutes before exposure to UV in order to create the intended protective barrier. It should be applied liberally and evenly to clean and dry skin. For an adult, the recommended application is 5ml (approximately one teaspoon) for each arm, leg, body front, body back and face (including neck and ears). That equates to a total of 35ml (approximately seven teaspoons) for a full body application.

Sunscreen should always be reapplied at least every two hours, irrespective of the water resistance of the sunscreen. Swimming, sport, sweating and towel drving can reduce the effectiveness of the product. so sunscreen should always be reapplied after these activities

IS SUNSCREEN ENOUGH?

Sunscreen should never be used as the only line of defence against sun damage. It is also important to remember that sunburn is caused by UV radiation, which is not related to temperature.

WHENEVER THE UV INDEX IS 3 OR ABOVE, **BE SURE TO:**

- Slip on some sun protective clothing that covers as much skin as possible - this offers the best protection
- Slop on broad spectrum, water resistant SPF30+ (or higher) sunscreen
- Slap on a hat broad brim or legionnaire style to protect your face, head, neck and ears
- Seek shade
- Slide on some sunglasses make sure they meet Australian standards.

STAYING HYDRATED

Working in the harsh Australian heat increases the risk of dehydration and heat stress for Australian workers. Most at risk are those working outdoors performing physically intensive labour and indoor workers who are exposed to high temperatures with poor ventilation. If you work in the heat, ensure you follow these tips to minimise your risk of heat illness and dehydration to stay safe and healthy.

1 DONT WAIT UNTIL YOU ARE THIRSTY

Don't wait until you are thirsty to drink. If you are thirsty you are already dehydrated. Instead drink small amounts frequently at regular intervals. 250mls every 15-20mins is the recommendation for working in the heat.

2 CARRY A DRINK BOTTLE OR COOLER

KEEP IT IN A COOL PLACE

You are more inclined to drink when fluid is readily available. Keep your cooler with you and ensure it is well insulated like the Frontier JugRnaut, with an easy pour/refill spout and lid.

3 PRE-HYDRATE

Recent workplace studies have shown that many Australian workers show up to work already 2% dehydrated. Drink plenty of fluids in the hours before your shift so that you are not starting your work day with a fluid deficit.

4 MONITOR YOUR BODY FLUIDS

Monitor how much you are sweating and going to the toilet and ensure you are replacing these fluids.

JugRnaut **COOLERS** 2.5 LITRE AND 5 LITRE WITH RETRACTABLE POURING SPOUT

- Fully insulated for temperature retention
- Carry handle with finger grip
- Removable drinking cup with handle
- Strong, high density plastic construction

50+ ULTRA LIP BALM SUNSCREEN

FEATURES AND BENEFITS

- Those looking for a very high SPF50+ protection everyday
- Improved "better feeling formula" now with mineral silica
- Tested for 4 hours water resistance
- · Our best selling formulation

50+ WORK PUMP PACK SUNSCREEN

FEATURES AND BENEFITS

- Dry touch formula: safe non-slip grip on tools, equipment and safety devices
- · Oil and fragrance free
- . Dry touch so dirt and dust won't stick
- · Zinco oxide and titanium dioxide free to not react with coated metal
- Helps employers meet OH&S responsibilities

SITE SAFETY

PREVENTION OF ACCIDENTS! THAT'S THE MAIN PURPOSE OF USING SITE SAFETY EQUIPMENT.

Our goal is to ensure both the worker and the public are kept safe through the utilisation of appropriate visual control safety lines for traffic, construction or facility areas.

FRONTIER'S VISUAL WARNING SAFETY **PRODUCTS:**

- Highlight potential hazards
- Identify danger and safe zones
- Delineate work or other activity areas.

Our products are treated for UV resistance, feature high visibility materials and use made-to-standard reflective tape where required.

TRAFFIC CONE

FR NTIER

FEATURES AND BENEFITS

- High quality PVC
- · High intensity orange colour
- · Sturdy cone and base
- 450mm and 700mm height
- · Sold individually
